

Program Learning Outcomes Managerial Economics

1. Conduct analysis of the benefits and costs of proposed infrastructure projects such as dams, roads, and airports.
2. Calculate the profit-maximizing level of output for competitive and monopoly firms.
3. Analyze the demand for public goods, such as national defense and assess policies to deal with externalities, such as pollution caused by the production of goods.
4. Analyze data and interpret regression models.
5. Analyze managerial decisions and use economic problem-solving techniques to address issues related to business management.
